ARCO

Engineering, Inc.

SINCE 1954

www.arcoengineering.com

3317 Gilmore Industrial Blvd.
Louisville, KY 40213

Ph: (502) 966-3134

Fx: (502) 966-3135

Size

1/4" - 4" (Full Port Tube OD)
Up to 1500 psig

End Connections

Extended Tube OD
Clamp Ends
Compression Tube Fitting
KF Vacuum Fitting
Flush Bottom Tank Pad

Valve Materials

316L Stainless Steel
Various Alloys

Ball and Stem Materials

316L Stainless Steel
Various Alloys

Seat Materials

TFM
PEEK
UHMWPE

Options

Cavity Filled Seats
Purge Ports
Electropolish Finish
10 Ra Finish
O₂ Cleaned

Service Applications

Biotech
Clean Steam
Cleaning Solutions
Detergents
Gas and Air Delivery
High Purity Gases
High Purity Water/Oils
Pharmaceutical
Vacuum
Waxes

Applicable Standards

ASME BPE
ASME B31.3
ISO 5211

Alloy Valves and Control**About the 2700 Series Ball Valve**

The AVCO 2700 series bottom entry diverter ball valve is a high quality and high performance sanitary valve for the diverter and mixing valve market. Using a 90-degree diverter ball allows the valve to flow different media into a common port and is often used for flushing lines or as a common valve into a mixing tank. When installed with a V ported ball, it offers metered mixing into a common line. The 180-degree ball option gives media swapping capabilities or media diversion. Available end connections include clamp end, extended butt weld tube OD, compression tube fittings and others. The stem is live loaded with blow out prevention and has online adjustment capability. Sealing occurs at the thrust washer inside the body to reduce the potential for leakage. Locking levers give positive diversion or shut-off and the ISO 5211 mount pad allows for many actuators, limit switches and positioners to be mounted with ease. Available with all the same options as most of our entire 2000 series range, these valves offer flexibility in materials and end styles for use in many applications that require a valve that meets ASME BPE and/or sanitary requirements.

Design

- The valve body has three cast sections (body and two end caps) with minimum wall thicknesses calculated per ASME B31.3 and ASME BPE.
- The three cast sections are bolted together with stainless steel nuts and bolts.
- Valve pressure ratings up to 1500 psig.
- Automatic Welding ends meet the requirements of ASME BPE DT-8.
- Hygienic Clamp ends meet the requirements of ASME BPE DT-9.
- Compression Fitting ends are inter-changeable with other popular brands of dual ferrule instrumentation tube fittings.
- Custom end styles are available upon request.
- The valve bore is full port for minimal interference to the flow.
- The valve body and ends have purge port options for CIP & SIP capability.
- Cavity filled seats are available to minimize dead space.
- All internal contact surfaces meet ASME BPE mechanically polished surface designation SF1 (Ra20) as a minimum with an option to meet electropolished surface designation SF4 (Ra15) or better.
- The valve body has an integral mounting pad conforming to ISO 5211.
- The stem has full blow-out prevention.
- The body seal is fully encapsulated.
- FDA21 CFR177 approved seat and seal materials are utilized as standard.
- Documentation available per ASME BPE GR-5.
- Valves marking per ASME BPE DT-11.2.
- The stem assembly enables online adjustment of the packing.
- All valves are pressure tested.
- Valve sizes available are 1/4" thru 4".

Operation

The following operators can be utilized on the valve:

- Oval Handles
- Spring Return Handles
- Lockable Handles
- Pneumatic Actuators.
- Electric Actuators.
- Positioners
- Limit Switches
- Proximity Sensors

1/4"	70	2
3/8"	70	2.5
1/2"	70	3.3
3/4"	80	7.9
1"	100	15.3
1 1/2"	290	39
2"	450	76
2 1/2"	900	130
3"	1200	196
4"	2000	365

General Notes

All Valves

1. Special customized end connections can be supplied to all valves upon request.
2. All valves can be adapted for cryogenic use.
3. All valves can have bonnet extensions added, which is particularly useful for flush tank pad applications.
4. Torque values are based upon TFM seats at full maximum differential. Please contact AVCO for other seat torques.

Compression Tube Fitting Ends

1. Valve sizes 1/4" and 3/8" can be supplied with a bracket to prevent tube twist upon valve operation.

Alloy Valves and Control

Valve Pressure Ratings

The AVCO 2700 series ball valve pressure ratings are determined using maximum allowable stresses and calculations, as specified in ASME B31.3 (Process Piping), based upon wall thicknesses as listed in ASME BPE for Extended Tube OD (ETO) ends. In addition the pressure ratings are checked against the ASME BPE requirements for an ambient temperature bursting strength of at least three times the rated internal pressure. For other end styles, such as compression fitting ends, the pressure rating can be increased - please contact AVCO for more information.

The standard pressure ratings are available as follows:

- 1500 PSIG - 1/4" thru 1"
- 1000 PSIG - 1 1/2" thru 2"
- 750 PSIG - 2 1/2" thru 4"

Unless otherwise requested, the 2700 series will be supplied with the standard pressure ratings on the valve tag.

Alloy Valves and Control

Maintenance & Repair

The AVCO 2700 series ball valve is a very reliable and robust design, but as with all resilient seated valves, the 'soft' parts are subject to wear over time. Replacing a whole valve is an unnecessarily high cost and as such, the 2700 series is fully repairable while in-line. Repair and maintenance kits are usually available for same day shipping and are easy to install when following the IOM manual.

AVCO is committed to ensuring repair and maintenance kits are available for your valves for many years service and even when we make design improvements to our products, we ensure all changes are backwards compatible.

Flow Plans

A variety of Flow Plans are available as shown below. Each Flow Plan is shown as viewed from the front of the valve with clockwise rotation (as viewed from above) based upon manual operation. '0' denotes the starting position of the sequence for clockwise rotation.

*****IMPORTANT***** The Flow Plan sequences will be reversed with '90' (for 2 position) or '180' (for 3 position) being the starting position for most pneumatic and electric actuators. Contact AVCO if actuated clockwise rotation as shown below is required.

FLOW PLAN 1
3 Way L-Port - 90°

FLOW PLAN 18
3 Way L-Port - 180° (Bottom Entry)
