Applications

- Chemical, Petrochemical
- Oil and gas refining
- Food industry
- Mechanical engineering

Special Features

- Pressure ranges from 50 InWC to 15,000 psi
 - FM, CSA approval for
 - Intrinsically safe Class I, II and III Division 1, Group A, B, C, D, E, F, G
 - Dust Class II and III Division 1, Group E, F, G
 - Class I, Zone 0, AEx ia II C
 - Ex- protection EEx ia I/II C T6 according to ATEX for:
 - Gases, vapors and mist: Connection to Zone 0, Zone 1 and Zone 2
 - Dust: Connection to Zone 20, Zone 21 and Zone 22
 - Mining: Category M1 and M2
- Suitable for SIL 2 according to IEC 61508 / IEC 61511

Right: IS-20-F with integral junction box

Approvals meet international standards

The IS-20 series of intrinsically safe pressure transmitters are designed for industrial pressure measurement applications in hazardous areas where intrinsically safe ratings are required.

Multiple intrinsically safe approvals include FM, ATEX and CSA. These multiple approvals provide for global recognition and acceptance of the intrinsically safe ratings. The transmitters are labeled with all three approvals to help support international shipments of OEM equipment designed with these transmitters.

Rugged construction

The stainless steel wetted parts feature an all-welded measuring cell for improved media compatibility. There are no internal soft sealing materials that may react with the media or deteriorate over time. The compact case is also made of stainless steel and is available with environmental protection ratings up to NEMA 6 (IP 68).

The IS-21-S and IS-21-F transmitters feature a flush diaphragm process connection. They are specifically designed for the measurement of viscous fluids or media containing solids that may clog a NPT process connection.

Types IS-20-F and IS-21-F feature an integral stainless steel junction box with internal terminal block for use in extremely harsh environments. A 1/2" NPT female conduit connection is standard on all models and a cable compression electrical connection is available as an option.

All types require a 10 to 30 volt supply provided by an intrinsically safe power supply or through an approved intrinsically safe zener diode barrier.

{vacuum, gauge pressure, compound ranges, and absolute pressure references are available}

¹) Ranges only available with Type IS-20

²) For Type IS-21 the burst pressure is limited to 21,000 psi unless the pressure seal is accomplished by using the sealing ring underneath the hex.

*Pressure applied up to the maximum rating will cause no permanent change in specifications but may lead to zero and span shifts

**Exceeding the burst pressure may result in destruction of the transmitter and possible loss of media

Relationship of media temperature to ambient temperature

Version	(A)	(B)	(C)
Cooling fins	2	3	5
K *	0.47	0.68	0.76

*cooling constant specific to each version

Calculation of cooling element performance:

$$T_B = T_{med} - (T_{med} - T_{amb}) \times K$$

T_B = Operating temperature of transmitter
 T_{med} = maximum temperature of process media
 T_{amb} = maximum ambient temperature
 K = Constant of cooling element

Maximum permissible ambient temperature:

$$T_{amb} = T_{med} + (T_B - T_{med}) / K$$
